The Botnet Group

We're a group of security enthusiasts on a mission to make the digital world a tad safer, one security check-up at a time. Our unique approach entails finding potential vulnerabilities to bolster overall security posture.

WLKY (Channel 32) offers valuable insights into the broader context of significant events occurring within Kentucky. Our research shows that WLKY sponsors community events and makes remarkable contributions to the community's well-being, which we commend. However, all good things must be safeguarded.

We are conducting a volunteer penetration and vulnerability assessment for your organization, aimed at ensuring adherence to best practices and enhancing data security. Rest assured, the assessment is designed to be non-disruptive to daily operations and will not access any proprietary data. Our intent is solely to provide constructive insights for security improvement.

The assessment will focus on the following areas, according to NIST 800-53, NIST SP 800-50 Rev. 1, NIST SP 800-95:

- Broadcast Security

- Employee Training

- Insider Threats

- News Fraud/Fake Sources

- Website Security

We will conclude our assessment on January 1st. Upon completion, we will provide access to the tools, code, and methodologies used during the assessment for your team's reference, promoting transparency, threat intelligence, and Security Operations Center (SOC) training.

Cheers to safer digital realms!
